

# Software requirements specification document for OfbooxSocial web app project

Mateusz Książek

November 2024

## 1 Introduction

This is a software requirements specification for the OfbooksSocial web app project. This is version 1.0 of the document.

## 2 Functional requirements

### 2.1 Creating account

User should be able to create an account that will allow him to use the web app. During the registration process user should provide such data as:

- Username
- Password
- Repeated password
- Email address

Optional requirement: after user submits the registration form, an email with activation link should be sent to the provided email address. Only after the user clicks on the activation link his account should be activated.

### 2.2 Logging into an account

User should be able to log into an account by providing username or email address associated with the account and the correct password.

### 2.3 Changing password

User should be able to change his password as long as he can provide his current password.

## **2.4 Password reset**

User should be able to reset the password to his account. First he should provide an email address associated with his account. Then a link to password reset should be sent to the email address.
